CERTIFICATE OF ACCREDITATION

This is to attest that

QAI LABORATORIES LTD.

3980 NORTH FRASER WAY
BURNABY, BRITISH COLUMBIA V5J 5K5
CANADA

Product Certification Agency PCA-118

has met the requirements of the applicable provisions of AC370, *IAS Accreditation Criteria for Product Certification Agencies*, has demonstrated compliance with ISO/IEC Standard 17065:2012, *Conformity assessment - Requirements for bodies certifying products, process and services*. This third-party product certification agency is accredited to provide the services specified in the scope of accreditation.

Effective Date December 3, 2024

President

Code Evaluation – Building Products	QAI Evaluation Program, QSP 7.6.5 – Procedure for Code Evaluation Report
	<i>Code Evaluation Reports (CER) are written to demonstrate compliance of building products and materials with the International Building Code (IBC) section 1703.4.2 or alternative solutions as defined in section A-1.2.1.1(1)(b) of the National Building Code of Canada. Evaluations of building products and materials may be performed following model codes such as the international family of codes published by the International Code Council (IBC, IRC, IFC, IMC, IECC, etc.) and/or the National Building Code of Canada, or other state / local codes that have been adopted based on the aforementioned model codes such as, but not limited to, the Florida Building Code, California Building Code, and City of LA Building Code. Evaluations may include fire protection, structural performance, seismic and vibration performance, environmental protection, acoustical performance, electrical safety, and electromagnetic compatibility.</i>

Environmental Product Declarations (EPDs)	QAI Evaluation Program <i>Program Operator has demonstrated that it follows the principles and has developed process for developing Type III environmental declarations programs and Type III environmental declaration including General Programs Instructions (GPI), Product Category Rules (PCR) and issuing Environmental Product Declarations (EPDs) in accordance with the International Standards indicated on this document.</i>
Program Operator that develops Type III environmental declarations programs and Type III environmental declarations.	ISO 14020:2022, Environmental labels and declarations – General Principles ISO 14025:2006, Environmental labels and declarations — Type III environmental declarations — Principles and procedures ISO 21930:2007, Sustainability in building construction — Environmental declaration of building products

Key Location: The certification activities conducted by QAI Laboratories at the following locations are also included in this scope of accreditation: 8385 White Oak Avenue, Rancho Cucamonga, CA

Notes:

1. The product certification used most closely resembles a product certification scheme type as described in ISO/IEC 17067 (2013), *Conformity assessment — Fundamentals of product certification and guidelines for product certification schemes*.
 - a. **Type 1b:** This scheme type involves the certification of a whole batch of products, following selection and determination as specified in the scheme. The proportion to be tested, which can include testing of all the units in the batch (100% testing), would be based, for example, on the homogeneity of the items in the batch and the application of a sampling plan, where appropriate. If the outcome of the determination, review and decision is positive, all items in the batch may be described as certified and may have a mark of conformity affixed, if that is included in the scheme.
 - b. **Type 3:** The surveillance part of this scheme involves periodically taking samples of the product from the point of production and subjecting them to determination activities to check that items produced subsequent to the initial attestation fulfil the specified requirements. The surveillance includes periodic assessment of the production process.
This scheme does not provide any indication of the impact the distribution channel plays on conformity. When serious nonconformities are found, the opportunity may exist to resolve them before widespread market distribution occurs
 - c. **Type 4:** The surveillance part of this scheme allows for the choice between periodically taking samples of the product from the point of production, or from the market, or from both, and subjecting them to determination activities to check that items produced subsequent to the initial attestation fulfil the specified requirements. The surveillance includes periodic assessment of the production process.
This scheme can both indicate the impact of the distribution channel on conformity and provide a premarket mechanism to identify and resolve serious nonconformities. Significant duplication of effort may take place for those products whose conformity is not affected during the distribution process.
 - d. **Type 5:** The surveillance part of this scheme allows for the choice between periodically taking samples of the product either from the point of production, or from the market, or from both, and subjecting them to determination activities to check that items produced subsequent to the initial attestation fulfill the specified requirements. The surveillance includes periodic assessment of the production process, or audit of the management system, or both. The extent to which the four surveillance activities are conducted may be varied for a given situation, as defined in the scheme. If the surveillance includes audit of the management system, an initial audit of the management system will be needed.
