Mobile Machinery and Heavy Duty Equipment	Technical Regulation for Machinery Safety – Part 2: Mobile Machinery and Heavy Duty Equipment: M.A-180-21-08-01 Scheme Type 1a
Cutting and Sawing Machines	Technical Regulation for Machinery Safety – Part 4: Cutting and Sawing Machines: M.A-188-23-05-02- 01 Scheme Type 1a
<b>Environmental, Health Protection, Safety</b>	<b>Saudi Standards, Metrology and Quality Organization (SASO); and Bay Area Compliance Labs Corp. (BACL)</b>
Fire fighting equipment and materials	Technical Regulation for Fire Control Materials and Equipment: M.A-172-19-04-02 Scheme Type 3

**Notes:**

The product certification used most closely resembles a product certification scheme type as described in ISO/IEC 17067 (2013), *Conformity assessment — Fundamentals of product certification and guidelines for product certification schemes*.

- a. *Type 1a: In this scheme, one or more samples of the product are subjected to the determination activities. A certificate of conformity or other statement of conformity (e.g. a letter) is issued for the product type, the characteristics of which are detailed in the certificate or a document referred to in the certificate. Subsequent production items are not covered by the certification body's attestation of conformity. The samples are representative of subsequent production items which could be referred to by the manufacturer as being manufactured in accordance with the certified type. The certification body may grant to the manufacturer the right to use the type certificate or other statement of conformity (e.g. letter) as a basis for the manufacturer to declare that subsequent production items conform to the specified requirements.*
- b. *Type 3: The surveillance part of this scheme involves periodically taking samples of the product from the point of production and subjecting them to determination activities to check that items produced subsequent to the initial attestation fulfill the specified requirements. The surveillance includes periodic assessment of the production process.*
- c. *This scheme does not provide any indication of the impact the distribution channel plays on conformity. When serious nonconformities are found, the opportunity may exist to resolve them before widespread market distribution occurs.*
- d. *Type 5: The surveillance part of this scheme allows for the choice between periodically taking samples of the product either from the point of production, or from the market, or from both, and subjecting them to determination activities to check that items produced subsequent to the initial attestation fulfill the specified requirements. The surveillance includes periodic assessment of the production process, or audit of the management system, or both. The extent to which the four surveillance activities are conducted may be varied for a given situation, as defined in the scheme. If the surveillance includes audit of the management system, an initial audit of the management system will be needed.*
