Notes:

1. *The product certification used most closely resembles a product certification scheme type as described in ISO/IEC 17067, Conformity assessment — Fundamentals of and guidelines for conformity assessment schemes.*

    a. ***Type 3:*** *The surveillance part of this scheme involves periodically taking samples of the product from the point of production and subjecting them to determination activities to check that items produced subsequent to the initial attestation fulfil the specified requirements. The surveillance includes periodic assessment of the production process.*
    This scheme does not provide any indication of the impact of the distribution channels or supply chain on conformity of objects. When serious nonconformities are found, the opportunity can exist to resolve them before widespread market distribution occurs.
